

**Amendment to the Specification:**

Please replace the paragraph on page 4 of the Specification beginning on line 23 with the following amended paragraph:

Lastly, power may be supplied remotely at the general-purpose interface 3. In one embodiment, alternating current (AC) power is used. Power is passed through the remote converter directly to the extension cable 7 and then to the local converter 9 where [is] it may be converted to preferred voltages before being driven onto the common cable 11. Alternatively, power may be supplied locally at the array of camera nodes 10. The recommended material for the extension cable 7 uses category '5' cable which is cost-effective, has adequately controlled impedance, and contains four twisted pairs of conductors.
